MY STORY

My name is Greg Harris, I'm an independent Digital Artist with a background in Graphic Design. I've always loved making artwork , working with others, and finding new exciting ways of sharing it with the world.

Currently I'm a student learning Web Development with the University of Washington, aspiring to become better at coding and programming, so I can hopefully better accomplish that goal in the future.

EMPLOYMENT

QFC/KROGER, Mountlake Terrace, WA — *Produce Clerk*

SEPTEMBER 2006 - PRESENT

(2006–2008): Courtesy Clerk
(2009–2015): Starbuck Barista
(2016–2021): Produce Clerk

EDUCATION

Mountlake Terrace Highschool

MONTH 2004 - MONTH 2008

I graduated from highschool in 2008 from Mountlake Terrace Highschool. Before leaving I began taking college courses at EDCC through the running start program in 2007.

Edmonds Community College

MONTH 2008 - MONTH 2010

After graduation I continued taking classes at EDCC and spent another two years working towards my associates degree, but wasn't able to complete it. I hope to return soon and eventually finish my degree.

- BLENDER

Meal Planner — *This web application helps the user plan their meals by searching for a recipe and drink, then save that information to a calendar for the week.*

https://rsowald.github.io/MealPlanner/

Your Neighbor Chef — *This web application helps the user sign up as a Foodie or Chef and connect with other locals who love food. A Foodie can order meals from their local chefs and Chefs can build menus to sell their dishes.*

https://github.com/Amal31497/Your-Neighbor-Chef

Password Generator — *This web application helps the user generate a randomized password to better ensure a safe and secure experience when making an account.*

https://gregharris90.github.io/Password-Generator/

Work Day Scheduler — *This web application helps the user map out their work by using a dynamic planner to input tasks into hourly slots for the day.*

https://gregharris90.github.io/Work-Day-Scheduler/

E-Commerce Backend — *This web application helps the user manage products, organized by their category and connected tags and product tags.*

https://github.com/GregHarris90/EC-Back-End

Team Profile Generator — *This web application helps the user build a team of employees, log their information through the terminal, and generate a basic webpage to display it.*
